I'm Computer Science Student Who Interest On

Linux Enthusiast

I am a big fan of the Linux operating system. Because of what? because Linux is open source and runs on any device. My laptop uses the Ubuntu distro that I use to work on projects. Because this OS is easier to use and I like it more than others.

Backend Developer

Back-end developers primarily develop and maintain the core functional logic and operations of a software application or information system. Typically, a back-end developer has expert programming skills in Java, Kotlin and other high-level programming languages.

Artificial Intelligence

Sometimes called machine intelligence, is intelligence demonstrated by machines, unlike the natural intelligence displayed by humans and animals. Colloquially, the term "artificial intelligence" is often used to describe machines (or computers) that mimic "cognitive" functions that humans associate with the human mind, such as "learning" and "problem solving".

Mobile Developer

A mobile developer creates software for mobile devices and technology. Whether for an Android, Apple or Windows platform, a mobile developer must learn the software development environment and programming languages for their chosen platform.
